1 stilbenes preparation and analysis - wiley-vch - a concise synthesis of substituted stilbenes from propargylic phosphonium salts by a cobalt-catalyzed diels-alder/wittig olefination reaction has been described (figure 1.4) [37]. it was shown that the cobalt(i)-catalyzed diels-alder reaction of propargylic phosphonium salts and alkyne-functionalized phosphonium salts with **gertz likhtenshtein stilbenes - the oxidative photocyclizations of stilbenes was discovered earlier during studies of the photochemical isomerization of stilbenes [1,2], but the reaction did not become feasible as a synthetic tool until mallory discovered in 1964 that iodine could catalyze the reaction [3,4]. that allowed for **ultrasound-assisted extraction of stilbenes from grape canes** - after the pruning season, can be considered as an unexploited source of stilbenes and other phenolics, as proposed by several authors [8,9]. the possible use of this material is gaining increased attention because of the promising applications in fields of cosmetic, food and pharmaceutical industries, and due to environmental concerns. **isolation of stilbenes from the stem of gnetum microcarpum** - over the last 15 years, plant stilbenes have received considerable interest, due to their biological activities and possible pharmacological applications. large numbers of natural stilbenes isolated from plants are oligomers which include dimers, trimers and tetramers. **review article stilbenes with tyrosinase inhibitory activity** -
